PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 3 years of experience building scalable **SaaS applications** and **microservices** using Node.js, TypeScript, Fastify, PostgreSQL, and AWS. Experienced in designing event-driven architectures, optimizing database performance, and delivering production systems serving multiple business domains. Improved API response times by up to **30%** and query performance by up to **40%**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP

Backend & Frameworks: Node.js, Fastify, Express, Next.js, Zod

Frontend: React.js, Next.js, HTML5, CSS3, jQuery

Databases: PostgreSQL, MongoDB, MySQL

Cloud & DevOps: AWS Lambda, EventBridge, Docker

Architecture: Microservices, REST APIs, Event-Driven Design, Serverless (AWS Lambda, EventBridge), Multi-Tenant SaaS

Integrations: Microsoft Graph API, Zoom API, Moodle LMS API, Twilio, SendGrid

Tools & Practices: Git, GitHub, Postman, CI/CD-friendly deployment, Performance Profiling & Debugging, ESLint, Prettier

KEY ACHIEVEMENTS

- Reduced API response times by up to **30%** through query optimization and schema-level indexing.
- Worked on and deployed **19+** production microservices serving a multi-tenant LMS platform.
- Led the migration from a legacy PHP monolith to a microservices architecture.

PROFESSIONAL EXPERIENCE

Software Engineer | E-Careers Pvt. Ltd. | Apr 2025 - Present

- Designed and delivered AvalXP, a scalable microservices-based LMS with dedicated services for learner, coach, admin, course, session, and notification domains, replacing a legacy PHP monolith.
- Built full-stack features using **React/Next.js (TypeScript)** on the frontend and **Node.js/Fastify** on **AWS Lambda** with **PostgreSQL** and **MongoDB** on the backend, including a modular admin UI for cross-service workflows.
- Implemented authentication, **role-based access control**, and permission management shared across frontend and backend services.
- Reduced API response times by up to **30%** through query optimization and schema-level indexing across **PostgreSQL** and **MongoDB**.
- Built event-driven communication using AWS EventBridge, powering notifications, gamification, badge management, student journey tracking, and document processing.
- Improved service throughput by **25%** while lowering resource usage through targeted performance tuning of high-traffic endpoints.
- Containerized services with Docker and structured the codebase for CI/CD-friendly independent deployments across **19+** microservices.
- Owned integrations with Zoom, Microsoft Graph, Moodle LMS, Twilio, and SendGrid for session scheduling, communication logging, and notifications.

Backend Developer | Catalyst Crew | March 2024 - Apr 2025

- Developed scalable backend services and REST APIs using **Node.js** and **TypeScript** to support enterprise business workflows.
- Designed modular backend components using clean architecture principles, increasing code reuse across internal applications.
- Built an internal Billing & E-Commerce platform supporting invoicing, supplier management, product catalog management, order processing, and sales reporting.
- Designed **PostgreSQL** schemas and optimized SQL queries, reducing redundant database calls by **25%** and improving response times for critical workflows.
- Implemented **JWT-based authentication** and **role-based access control (RBAC)** to secure multiple internal user roles.
- Collaborated with cross-functional teams to ship production-ready features, improving deployment stability and accelerating feature delivery.
- Containerized backend services with Docker, streamlining local development and deployment consistency across internal applications.
- Built an analytics dashboard surfacing key business metrics — total customers, recurring monthly buyers, profit & loss, product purchase/sales volume, and a top-customer list used to identify candidates for special discounts.

EDUCATION

B.Tech in Information Technology (Honours in Data Science)

K J Somaiya Institute of Technology, Mumbai

CGPA: 9.23
